

Bodanapalli Devik

Cloud DevOps Engineer

Dallas, TX | Bdrwork97@gmail.com | 945-323-4349 | LinkedIn

PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with over 5 years of hands-on experience building and managing cloud infrastructure in AWS and Azure. I specialize in automating deployments, optimizing CI/CD pipelines, and improving system reliability through smart monitoring and security practices. I enjoy working on scalable solutions and continuously learning new tools that help teams deliver faster and more securely.

TECHNICAL SKILLS

Cloud: Microsoft Azure (AKS, Azure DevOps, Azure Monitor, Azure Policy, Azure Key Vault), AWS (EKS, EC2, S3, CloudFormation, CloudWatch, IAM, Lambda, ECR)

Containers: Docker, Kubernetes (AKS, EKS), Helm, Azure Container Registry, AWS ECR

Monitoring: Azure Monitor, Application Insights, Grafana, Prometheus, ELK Stack, Datadog

Networking: VNET Peering, NSGs, Load Balancers, VPN Gateway, Transit Gateway, DNS, NAT

Databases: Azure Synapse Analytics, MySQL, Redis, NoSQL, Amazon RDS, Amazon S3

IaC: Terraform, Bicep, CloudFormation, Ansible, PowerShell, Bash

CI/CD: Azure DevOps Pipelines, Jenkins, GitLab CI/CD, GitHub Actions, AWS CodePipeline

Security: Azure Policy, Sentinel SIEM, AWS IAM, STIG, HIPAA, ISO 27001, FedRAMP, WAF, NSGs

Scripting: Python, PowerShell, Bash, Go, JavaScript, TypeScript

Tools: Git, ArgoCD, FluxCD, Terraform Cloud, OPA, Gatekeeper, Sentinel, Blue-Green/Canary Deployments

PROFESSIONAL EXPERIENCE

Cloud Engineer — Duke Energy

Feb 2026 – Present | United States

- Built AWS infrastructure using Terraform and CloudFormation to set up EC2 instances, S3 buckets, and VPCs, significantly speeding up new environment setups.
- Designed secure and segmented VPC architectures with public/private subnets, route tables, NAT gateways, and security groups, enhancing network security and reducing attack surface.
- Managed Kubernetes clusters on EKS, including Helm deployments and node group scaling, to support large-scale applications running 24/7.
- Implemented load balancing solutions with AWS Application Load Balancers and Network Load Balancers to ensure high availability and fault tolerance across services.
- Developed and maintained CI/CD workflows with Jenkins and AWS CodePipeline, incorporating automated testing and security scans, decreasing deployment lead times by over 60%.

- Established robust identity and access controls with fine-grained AWS IAM policies and multi-account governance, minimizing privilege-related security risks.
- Integrated AWS Secrets Manager with EC2, Lambda, and ECS for secure dynamic secrets rotation.
- Executed automated OS patching and compliance scans across over 100 EC2 Linux servers via AWS Systems Manager and Ansible, maintaining 100% adherence to security baselines.
- Led the successful migration of legacy on-premises applications to AWS cloud, optimizing infrastructure costs by 35% while improving scalability through Auto Scaling Groups.
- Configured lifecycle policies and cross-region replication for AWS S3 buckets to optimize storage expenses and strengthen disaster recovery capabilities.
- Deployed Amazon RDS for PostgreSQL with Multi-AZ deployments, parameter group tuning, and performance insights integration, ensuring 99.99% availability for backend services.
- Set up AWS WAF and Shield to improve web application security and reduce exposure to common threats like SQL injection and XSS.
- Centralized logging and auditing by integrating AWS CloudTrail with ELK stack and Athena, streamlining forensic investigations and compliance reporting.
- Automated serverless processes with AWS Lambda and Step Functions to execute event-driven workflows, boosting operational efficiency by 25%.
- Provisioned and optimized MongoDB clusters on Amazon EC2 and EBS-backed storage with CloudWatch metrics, automated S3 backups, replica sets, and sharding.
- Established and maintained Multi-AZ Amazon RDS instances with automated backup and failover configurations, achieving recovery point objectives under 5 minutes.
- Automated serverless deployment workflows for AWS Lambda using GitHub Actions and AWS CodePipeline.
- Conducted chaos engineering experiments using Gremlin in staging clusters to test autoscaling and pod failures.
- Built GitOps workflow with FluxCD to manage Helm-based deployments in EKS with multi-env automation.
- Created centralized compliance dashboards by integrating CloudTrail logs with Athena and custom Config Rules.
- Handled incident escalations as part of the on-call team, and helped document fixes and RCAs to avoid repeat issues.

Cloud DevOps Engineer — DXC Technology

Jan 2024 – Jan 2026 | United States

- Responsible for architecting, designing, implementing, and supporting cloud-based infrastructure and its solutions.
- Managed Amazon Web Services (AWS) infrastructure with automation and orchestration tools such as Chef.
- Proficient in AWS services like VPC, EC2, S3, ELB, Auto Scaling Groups (ASG), EBS, RDS, IAM, CloudFormation, Route 53, CloudWatch, CloudFront, and CloudTrail.
- Created multiple VPCs and public/private subnets as per requirement and distributed them across various Availability Zones.

- Created NAT gateways and instances to allow communication from private instances to the internet through bastion hosts.
- Involved in writing Java API for Amazon Lambda to manage some AWS services.
- Used security groups, network ACLs, internet gateways, and route tables to ensure a secure zone for the organization in AWS public cloud.
- Created and configured Elastic Load Balancers and Auto Scaling Groups to distribute traffic and maintain a cost-efficient, fault-tolerant, and highly available environment.
- Created S3 buckets in AWS to store files, including static content required for web applications.
- Used AWS Elastic Beanstalk for deploying and scaling web applications and services developed with Java.
- Configured S3 buckets with lifecycle policies to archive infrequently accessed data to different storage classes based on requirements.
- Created and launched EC2 instances using Linux, Ubuntu, RHEL, and Windows AMIs, and wrote shell scripts to bootstrap instances.
- Used IAM to create roles, users, and groups, and implemented MFA to provide additional security to AWS accounts and resources.
- Wrote CloudFormation templates in JSON to create custom VPCs, subnets, and NAT configurations for successful deployment of web applications.
- Implemented DNS using Route 53 for highly available and scalable applications.
- Maintained monitoring and alerting of production and corporate servers using CloudWatch.
- Created EBS volumes for storing application files and mounted them to EC2 instances.
- Built snapshots to back up volumes and created AMIs to store launch configurations of EC2 instances.
- Wrote AWS Infrastructure as Code templates using Terraform to build staging and production environments.
- Installed Workstation, Bootstrap Nodes, wrote Recipes and Cookbooks, uploaded them to Chef Server, and managed AWS for EC2, S3, and ELB using Chef Cookbooks.
- Wrote Chef Cookbooks for installing Tomcat, JBoss, Nginx, WebLogic, and WebSphere, and for configuring load balancers and failover.
- Responsible for Continuous Integration and Continuous Delivery process implementation using Jenkins along with Python and shell scripts to automate routine jobs.
- Implemented Continuous Integration using Jenkins and Git from scratch.
- Responsible for tasks like branching, tagging, and release activities using version control tools like SVN and Git.

DevOps Engineer — Cybage Software

May 2020 – Aug 2022 | India

- Designed and deployed scalable Azure infrastructure using Terraform and Bicep, provisioning AKS clusters, VM Scale Sets, VNets, and Key Vault, reducing deployment time by 90%.
- Automated end-to-end CI/CD pipelines with Azure DevOps, incorporating security scanning and gated approvals, cutting release cycles by 70%.
- Managed Azure Kubernetes Service (AKS) for microservices supporting 200K+ daily users with 99.99% uptime.

- Implemented Azure Service Bus and Event Hubs to build reliable, scalable event-driven architectures, enabling seamless microservices decoupling and real-time data streaming.
- Integrated Prometheus with Azure Kubernetes Service (AKS) for advanced metrics collection and alerting, improving incident response time by 45%.
- Implemented Policy-as-Code and Sentinel to enforce compliance, decreasing audit findings to zero for ISO 27001 and HIPAA reviews.
- Automated patching and hardening of 120+ Linux VMs using Ansible and PowerShell, achieving 100% compliance with STIG security standards.
- Led root cause analysis and postmortems for major incidents, which helped the team identify patterns and prevent similar outages in the future.
- Designed and maintained Azure networking including VNET peering, NSGs, and private endpoints, ensuring secure multi-region connectivity.
- Built serverless CI/CD pipelines using GitHub Actions and Azure Functions for event-driven automation across microservices.
- Designed GitOps-based deployment strategy using ArgoCD and Helm for AKS, improving rollback capability and audit readiness.
- Collaborated cross-functionally with security and compliance teams to implement FedRAMP and NIST controls within cloud environments.
- Provisioned Apache Cassandra clusters on Azure VMs using Terraform and Ansible with replication, auto-healing, and Prometheus-based monitoring.
- Built reliable backup and disaster recovery workflows for key applications, achieving recovery goals of under 15 minutes RPO and 1 hour RTO.

EDUCATION

Master of Science in Information Systems
Northwest Missouri State University

Aug 2022 – Dec 2023

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (2023)
- AWS Certified Cloud Practitioner (CCP) (2025)
- Microsoft Certified: Power BI Data Analyst Associate (2023)
